Satsuma is an IT solutions company that specialises in web development, systems integration, mobility solutions and business intelligence, providing its clients with quality solutions that focus on improving business efficiency and profitability.

As a solutions company Satsuma is always looking for the best way to provide our clients with products and services that will meet their business needs. We have found that QlikView is the perfect product in that it allows us to deliver exceptional reporting and analysis solutions to our clients, quicker and easier than ever before.

Business intelligence solutions

QlikView offers organisations, both large and small, a cost effective way of providing reporting and analysis solutions on data that is not necessarily in a Data Warehouse. The key here is that data can be sourced from multiple locations and different technologies.

Whilst QlikView is capable of interfacing with all large relational databases, Satsuma is focussing on unstructured information which has been traditionally very difficult to effectively report on. Data that is found in Lotus Notes databases, or aggregated through multiple Excel spreadsheets are perfect candidates for a QlikView solution.

Satsuma Approach

Matthew Cunneen, Satsuma CEO: "If you want to spend months building your data warehouse before you deliver a single report then there are plenty of large BI solutions available. If you want to be making real business decisions on your information within days or weeks, then Satsuma can help develop a solution for you using QlikView."

QlikView offers a new perspective for database applications. It has a unique interface that is not focused on tables or forms or reports, instead gives the user various presentation interfaces to suit the needs of a particular circumstance. QlikView users work with a color-coded, point-and-click interface that brings the data relationships to the surface to aid the user in understanding and interpreting it.

QlikView™

QlikView Capability Highlights:

- * Highly interactive visual interface
- * Patented In-Memory Association Technology
- * Ability to handle extremely large data sets
- * True free format analysis on highly compressed data
- * Complete Dashboard view—customized to your KPIs
- * Multi-dimensional (A vs B) analysis
- * Detailed drill-down into trends by key dimensions
- * What-if analysis for building projections
- * All standard chart style reports eg. bar, pie, line, scatter
- * Specific period based analysis

Client Quote:

"I've never seen Lotus Notes data presented in such a powerful and compelling way. The familiar dashboard format allows for real insights from our data to be generated at a glance. The speed and ease at which Satsumas delivered an amazing BI solution through QlikView has been exceedingly impressive."
 Ben Tabell, Asia Pacific Service Delivery Director, Diaqeo.
