

Satsuma is an IT solutions company specialising in business intelligence, systems integrations and web and application development.

Our job is to bridge the gap between IT and the people who use it, tailoring solutions to make sure they deliver the information our clients need, intuitively, simply and quickly.

## The Satsuma Project Methodology - discover, create, inspire.

Here at Satsuma we use agile programming to help us deliver with speed and agility. What's more, every project sits within the Satsuma Project Methodology, a tried-and-tested way of working which ensures that everything we do is carefully considered and thoroughly thought-through, as well as nimble.

### Discover

The Project Initiation stage helps us to define the exact scope of the project and agree our deliverables. This is where we work closely with our clients to get to the root of their technology challenges, and thoroughly explore all the options open to them. Our aim is to deliver the solution that fits their needs to a 't' - nothing more, nothing less.

## AREAS OF EXPERTISE

- Lotus Notes to SharePoint Migration
- Business intelligence with Qlikview
- Application Development, Intranet and Extranet and Corporate Portal Development.
- Enterprise integration, i.e SAP, PeopleSoft, Oracle, SQL
- SharePoint Application Services
- Content Management Systems

## Create

The **Build** stage is where the magic happens! This is where thorough planning ensures we design and create the perfect solution, every time.

The **Test** stage is our way of making 100% sure we're happy with the quality and suitability of every single application and system component which we have recommended.

The **Implement** stage is where we move the application from development into the real world. All our planning is designed to make this happen in a seamless and accident-proof manner. This is also where we think about what training is needed to make sure every user gets the absolute most they can out of their new investment.

(Of course the discovery doesn't just stop at the "Discover" phase....it's amazing what inspirations and revelations can pop up during the 'Create' phase too! It's what agile programming is all about.)

## Inspire

Our clients' new, tailored systems are now up and running. This is where the inspiration starts, as users experience the reality of increased efficiencies, smoother work flow, speedier results and break through revelations.

For us, this is where the most exciting stage happens: the **Project Review**. We like to hear how the new software has changed the way our clients work, how they feel the project went and any ideas they have about how we could have done better.

All suggestions are fed back through a system of **Continuous Improvement**, making sure the Satsuma Project Methodology gets stronger and more effective every time.

**The Satsuma Project Methodology** - A tried and tested system which delivers inspirational results in a nimble and well-thought-through manner. That's just how we do things around here.
